SUMMARY

Full-stack engineer with production experience across healthcare and travel tech. Currently Founding Engineer at Tint, building a FastAPI + Next.js platform on AWS with an OpenAI-powered itinerary generation pipeline. IIIT Delhi CSE 2026 grad with a side interest in quantum computing (IBM Qiskit Global Summer School 2024) who likes shipping things that work.

EXPERIENCE

Tint | Founding Engineer · Travel Tech Startup

Apr 2026 – Present

- **Backend & Cloud Infra:** Async FastAPI REST API on AWS App Runner with PostgreSQL (RDS) for storage and Redis (ElastiCache) for sessions and rate limiting.
- **System Design & Performance:** Two-step OpenAI itinerary pipeline with HTTP 202 async polling to decouple LLM calls from the client, keeping the UI responsive despite API latency.
- **Frontend & Security:** Mobile-optimized Next.js 16 UI (430px) with Zustand, custom Tailwind v4 design system, Twilio OTP auth, and AWS Amplify deployment.

2070 Health | Software Engineer (Contract) · Healthcare Platform

Jan 2026 – Apr 2026

- Frontend engineer on EverHope (10k+ users). Built patient-facing pages across oncology, nutrition, and diagnostics from Figma with responsive layouts and content updates.
- Built end-to-end appointment booking (OTP, live EHR, Razorpay, Salesforce CRM sync); led SSR migration and SEO overhaul across 50+ pages; caught a Docker misconfiguration routing traffic to staging.

Kuzushi Labs | Freelance Software Engineer · AI Startup

Nov 2025 – Mar 2026

- Built Anowmly from scratch: custom hero animation (rectangle-to-cube), WebPlayer, film-strip carousel, and contact form. Migrated video assets to Cloudinary. Stack: Next.js, TypeScript, Framer Motion, Tailwind CSS.
- Shipped Kuzushi Labs' site with GSAP, Three.js 3D, Framer Motion, and Lenis on Next.js 16 / React 19. Rebuilt the Healthtech-Redefined design system with shadcn/ui and Tailwind CSS.

Adiamara | Freelance Frontend Engineer · E-commerce

Apr 2026

- Delivered UI fixes and improvements for Adiamara, a luxury lab-grown diamond e-commerce brand based in Dubai (adiamara.com). Handled Shopify integration and frontend polish across product and landing pages.

EDUCATION

Indraprastha Institute of Information Technology, Delhi

2022 – 2026

B.Tech, Computer Science and Engineering

ACHIEVEMENTS

- Google Advanced Data Analytics Certificate, Coursera 2025
- Qiskit Global Summer School, IBM Quantum Computing 2024

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, TypeScript, HTML/CSS, SQL

Frameworks: React.js, Next.js, FastAPI, Node.js, TailwindCSS, Framer Motion, GSAP, Three.js

AWS & DevOps: App Runner, RDS, ElastiCache, Amplify, Docker, Nginx, GCP, PM2, Git/GitHub

Databases: PostgreSQL, MongoDB, Redis, Firebase

PROJECTS

git-newspaper: Victorian Broadsheet Generator from Git History (Self)

Apr 2026

- Open-source npm CLI that trended on r/coolgithubprojects and r/node within 24 hours of launch, picking up 100+ stars and 500+ downloads with zero marketing.
- Detects 9 commit-pattern archetypes and renders fully typeset broadsheets with inlined fonts, SVG activity charts, and archetype-specific editorial voice. No LLM dependency, runs fully offline.

CipherLens: Classical Cipher Identification via ML (Academic)

2025 – 2026

- B.Tech project at IIIT Delhi. Built a full-stack ML web app that identifies 22 classical cipher types (monoalphabetic, polyalphabetic, polygraphic, transposition, fractionating, and modern block) from raw ciphertext with no keys or plaintext required.
- Trained three complementary models on 550k samples, a dual-input Hybrid CNN (79.24% val accuracy), a character-level DL CNN, and a two-stage XGBoost classifier, using 15 statistical features (entropy, IoC, bigram entropy). Stack: FastAPI, PyTorch, XGBoost, Next.js 16, TypeScript, Tailwind CSS, Docker Compose.

newsforge: Autonomous AI News Digest Agent (Self)

May 2026

- Built a LangGraph agent that runs every morning via GitHub Actions, pulls ~40 AI/tech articles through Tavily, filters and categorizes them with GPT-4o-mini, and sends a clean digest to email (SendGrid) or WhatsApp (Twilio). Costs under \$0.20/month to run.
- Pipeline runs as discrete nodes: Search, Filter, Categorize, Summarize, Format, and Deliver, with Jinja2-templated HTML emails. Stack: Python 3.12, LangGraph, LangChain, GPT-4o-mini, Tavily, SendGrid, Twilio, GitHub Actions.
