Education

Indraprastha Institute of Information Technology, Delhi

2022–2026

Bachelor of Technology in Computer Science and Engineering

Technical Skills

Programming Languages: C++, Python, JavaScript, TypeScript, HTML/CSS, SQL

Frameworks and Libraries: React.js, Next.js, Node.js, FastAPI, Jetpack Compose, TailwindCSS

Cloud and DevOps: Docker, Nginx, Cloudflare, Git, GitHub, PM2, GCP

Databases: MongoDB, PostgreSQL, Firebase

Development Tools: Visual Studio Code, Linux, Alembic, Claude Code, Stitch

Experience

2070 Health

Jan 2026 – Present

Software Engineer / Healthcare Platform

- Primary frontend engineer for **EverHope**, 2070 Health's cancer care platform; built and maintained patient-facing service pages across oncology, nutrition, and diagnostics verticals from **Figma designs**, handling responsive layouts, UI iteration, and ongoing content updates.
- Architected an end-to-end **doctor appointment booking system** with OTP verification, real-time slot selection, and **Salesforce lead integration**; extended the booking flow across doctor profile pages and landing pages; built a **dynamic blog recommendation engine** with cross-content-type filtering.
- Led a comprehensive **SEO and accessibility overhaul** — SSR migration, structured data, metadata standardization, HTML semantics, and canonical fixes; diagnosed a critical **Docker env var bug** causing production to silently use staging credentials, directly impacting live appointment availability.

Kuzushi Labs

Nov 2025 – Present

Software Engineering Intern / AI Startup

- Built **Anowmly** from scratch — a creative studio website with a multi-page architecture (portfolio, museum, about, contact); engineered a custom **absurd.com-inspired hero animation** (fullscreen rectangle-to-cube transition), an ambient **WebPlayer** with track management, a **film-strip carousel**, and a contact form with validation and success animation; migrated all video assets from **Vimeo to Cloudinary**; shipped on **Next.js, TypeScript, Framer Motion, and Tailwind CSS**.
- Contributed frontend work to **ChitChat**, an AI companion platform; built the **floating conversation UI** with loading states, **chat history overlay**, and companion cards; fixed **admin panel** dropdown persistence and card layout issues; optimized **3D avatar assets**; and standardized UI error handling across the app.
- Shipped **Kuzushi Labs** — the startup's production website — featuring **GSAP scroll-triggered animations, Three.js 3D, Framer Motion, and Lenis smooth scroll** on **Next.js 16 / React 19**; also executed a complete UI overhaul of **Healthtech-Redefined**, a large-scale healthcare platform, rebuilding the entire frontend design system with **shadcn/ui** and **Tailwind CSS**.

Projects

ToolTree – MCTS-Based Tool Planning for LLM Agents

Mar 2026

- Implemented **Monte Carlo Tree Search** with dual-feedback pruning from an **ICLR 2026 paper** — pre-evaluates tool candidates before execution and prunes dead-end branches, reducing wasted API calls in multi-step LLM agent workflows.
- Built pip-installable Python library with **3 LLM providers** (OpenAI, Gemini, Anthropic), **MCP server integration** for Claude Code/Cursor, token usage tracking, and **92 unit tests**; benchmarked against native Claude Code on a production healthcare codebase.

GradeDash – AI-Powered Academic Dashboard

Mar 2026

- Built full-stack academic dashboard with **Next.js 16, TypeScript, Prisma, PostgreSQL** — features AI-powered PDF transcript parsing via **GPT-4o**, SGPA/CGPA visualizers, graduation requirements tracker, and future semester grade predictor.
- Implemented **RAG-based chatbot** using OpenAI Assistants API for university regulation queries, **Auth.js** for secure authentication, and quota-protected API routes with rate limiting for production deployment.

Achievements

•Google Advanced Data Analytics

2025

Completed the Coursera course to learn comprehensive data analysis and machine learning.

•Qiskit Global Summer School

2024

Participated in the IBM Quantum Computing Summer School.
