Education

Indraprastha Institute of Information Technology, Delhi

2022–2026

Bachelor of Technology in Computer Science and Engineering

Technical Skills

Programming Languages: C++, Python, JavaScript, TypeScript, HTML/CSS, SQL, Go, Kotlin

Frameworks and Libraries: React.js, Next.js, Node.js, FastAPI, Jetpack Compose, TailwindCSS

Cloud and DevOps: Docker, Nginx, Cloudflare, Git, GitHub, PM2, GCP

Databases: MongoDB, PostgreSQL, Firebase

Development Tools: Visual Studio Code, Claude Code, Linux, Alembic, Tableau

APIs and Integration: OpenAI APIs, Google Cloud APIs, RESTful APIs, System Design(basic)

Experience

Kuzushi Labs

Nov 2025 – Present

Software Engineering Intern / AI Startup

- Developed and deployed **5 production full-stack applications** using **Next.js, React, TypeScript, Python (FastAPI)**, spanning sales analytics, medical risk scoring, AI chatbots, and creative agency websites; owned end-to-end deployment with **Nginx reverse proxy, SSL, PM2, CORS policies**, and domain configuration.
- Engineered backend systems including **background job queue processing** for long-running API tasks, AI agent workers with field mapping for medical score calculation, **database schema migrations (Alembic/PostgreSQL)**, and RESTful API architecture.
- Built responsive, production-ready frontends with **shadcn/ui, GSAP animations, Lenis smooth scroll, particle systems**, and third-party integrations; executed major UI refactor removing **16,000+ lines of legacy CSS across 75+ files**.
- Developed sales call evaluator from scratch with **real-time speaker diarization, background queue processing** to prevent API timeouts, and insights dashboard analyzing key sales performance metrics.

2070 Health

Jan 2026 – Present

Software Engineer (Part-Time) / Healthcare Platform

- Executed **CSR-to-SSR migration across 17 Next.js pages** (3 batches), extracting client components, removing redundant **next/head** usage, and adding **generateMetadata()** — resolving **172 broken canonical tags, duplicate title issues**, and meta tags rendering outside **<head>**; cleaned up sitemap pipeline by removing **400+ lines of dead code**, reducing **sitemap.ts from 582→210 lines**.
- Diagnosed critical **Docker build pipeline bug** where **NEXT_PUBLIC_* env vars weren't passed to builder stage**, causing production to silently use staging API credentials — **directly impacting live patient appointment slot availability**; fixed revenue-attribution bug by replacing hardcoded pathname with **dynamic usePathname()**, restoring accurate LeadSource mapping for **Google Ads/Meta campaigns**.
- Maintained production **Next.js/React/TypeScript** healthcare platform — shipped landing page component swaps, doctor profile updates, audited/fixed **18 broken internal links** (dead routes, redirect hops), and catalogued 200+ CMS-sourced broken links with fix plan for content team.

Projects

Narayana Cardiac Risk Scoring System

Nov 2025

- Deployed a production **React/TypeScript PWA** for Narayana Health, modernizing **120+ components with Radix UI & Tailwind CSS** for offline-first clinical usage by hundreds of clinicians.
- Integrated an **AI-powered STS risk calculator** to automate cardiac surgery risk assessment, achieving **sub-minute computation with <200ms API latency and 82% test coverage**.

Kuzushi Labs Company Website

Dec 2025 - Jan 2026

- Built company website end-to-end from initial commit to production — featuring advanced animations (**GSAP ScrollTrigger, Lenis smooth scroll, particle systems**), **Google Sheets backend** for lead capture, and responsive design across all pages.
- Configured production infrastructure with **PM2 cluster mode, Nginx reverse proxy with SSL, domain redirects**, and ACME certificate management; deployed live site handling client traffic.

Achievements

•Google Advanced Data Analytics

2025

Completed the Coursera course to learn comprehensive data analysis and machine learning.

•Qiskit Global Summer School

2024

Participated in the IBM Quantum Computing Summer School.
